

ACCESS LINE

Helpful Hints

Clear the baton memory after every upload.

Speeds up the download time. Ensure that all the data on the baton is from the last patrol.

Keep a test I.D. point near the computer and clock it before & after each upload

Ensure that the baton is working when the baton is handed out and received – by having the 1st and last clocking. Minimise the risk of guard abuse due to electrical overloads eg: shocking the baton, creating corrupt data.

Give the guard an I.D. point

To clock himself each time he comes ON duty, does a PATROL and when he goes OFF duty again, to monitor his time.

Tag your assets

Keep an eye on the movement of your belongings eg: Fleet of containers

Expanding on a simple site

Purchase extra batons for each guard doing simultaneous route. Then set up the system to distinguish between each route and use only 1 UComm three (upload station) per site.

High priority site with multiple routes

Use one upload station for multiple sites by separating the automated reports at the set up stage.

One unit for multiple sites

No need to buy a new kit. Purchase only the Online unit and use the same batons and points.

Avoid damage

Check the lanyard keyring. This is the first sign that the baton is being abused and the cheapest repair. Log hand over of the baton in the OB book.

Elvey is a leading distributor of electronic security equipment in Africa.

Our vision is to assist in the protection of people and property by providing quality, innovative products and solutions to the electronic security industry, thereby ensuring a safe and secure future for all.
